Sensors, Rotary Angle

Hella rotary angle sensors are used to record angles in a wide area of application. The determination of the angle is inductive using a non-contact and thus wear-free method. This guarantees the high degree of measuring accuracy over the entire service life. The sensor with its integrated electronics provides both a voltage relative to the angle measured (analogue) and a PWM signal (pulse width modulated digital signal) at its output, ensuring universal use of the rotary angle sensor.

		Indication	Length of lever arm	Zero position
6PM 008 161-121	1	Rotary angle sensor	70mm	0°/120°/240°
6PM 008 161-131	1	Rotary angle sensor	70mm	60°/180°/300°
6PM 008 161-141	1	Rotary angle sensor	50mm	30°/150°/270°
6PM 008 161-151	1	Rotary angle sensor	50mm	90°/210°/330°

Product descriptions

If an oxygen sensor is replaced, the following should be noted when mounting the new sensor:

- For dismounting and mounting, use only the tool which is intended for that purpose.
- Check the thread in the exhaust system for damage.
- Use only the grease which is supplied with, or specially intended for, oxygen sensors.
- Avoid having the sensor measuring element come into contact with water, oil, grease, cleaners or rust-removers.
- Note the torque specification of 40 - 52 Nm for M18x1.5 threads.
- When laying the connecting cable, ensure that it does not touch any hot or moving parts, and that it is not laid over any sharp edges.
- Lay the connecting cable of the new oxygen sensor as similarly as possible to the way the original oxygen sensor was mounted.
- Make sure the connection cable has enough play so that it is not torn off by vibrations and movements of the exhaust system.
- Inform your customer not to use any metal-based additives or leaded fuels.
- Do not use any oxygen sensors that have been dropped or are damaged.
