

# THE GATES AGRICULTURAL BELT PROGRAMME 2010

**LEGAL DISCLAIMER**

The parts listed in this catalogue (ref. E/20142) are all manufactured by Gates. The use of the original manufacturers' part numbers is for reference purposes only. Gates offers Gates replacement parts for use in the equipment of various manufacturers. The Gates parts offered are not original manufacturers' parts. The belts contained herein are not sponsored, affiliated or otherwise connected in any way with the manufacturers named in this catalogue.

Every effort has been made to ensure the accuracy and comprehensiveness of the information given in this catalogue. However, Gates cannot be held responsible if its products are used in special or exceptional circumstances without prior consultation with and clearance from a Gates representative. If your catalogue is more than 1 year old, please consult a Gates representative to check whether you have the latest version. In addition, you can always download the most recent version of this catalogue from our website at [www.gates.com/europe/agri](http://www.gates.com/europe/agri).

#### **THE GATES AGRICULTURAL BELT PROGRAMME**

*Recognising the demands of agricultural machinery, Gates offers you a specially designed Agricultural Belt Programme. This comprehensive range of agricultural replacement belts covers a multitude of applications on combine harvesters and tractors. The programme ensures trouble-free and long-lasting service in the most demanding working conditions of farming machinery. Gates products are built to original equipment quality and offer excellent performance.*

## Fit for heavy duty

Gates is a leading manufacturer of high-quality and heavy-duty belts for the automotive, industrial and agricultural markets. Gates belts feature superior performance through the use of state-of-the-art materials and manufacturing processes. Choosing Gates is not just buying belts, but also being assured of the power of an experienced brand name. Gates has a long history of creating new products and materials to meet constantly evolving requirements. Our worldwide customer base stems from our advanced belt technology, product development policy and innovative design procedures.

***As a supplier to leading original equipment manufacturers all over Europe, Gates offers an OE equivalent for your belt replacements!***

## Designed for demanding agricultural drives

Agricultural belts work in the heaviest conditions possible. Combine harvesters and tractors work outdoors, often in constant sunlight and therefore hot conditions. The use of relatively small tensioners is common, which implies a significant additional load on the belt in terms of deformation and temperature increase. In addition, the belts are subjected to dust, dirt, stones and other objects that may enter between the belt and the pulley. For all these reasons, you should only use belts specifically designed for use on agricultural applications, as these are built to specifications capable of withstanding such harsh conditions.

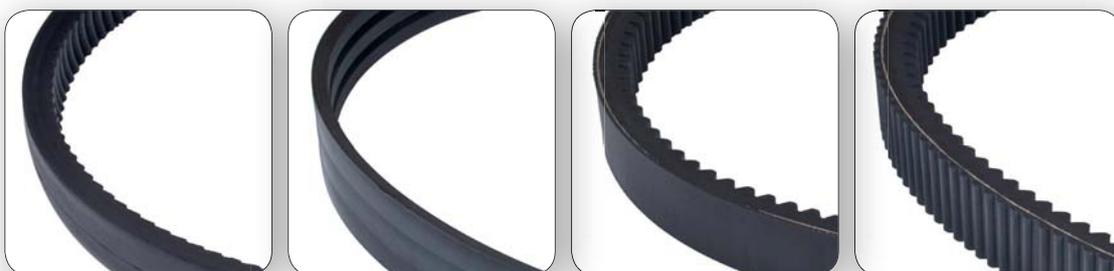

Gates offers the agricultural replacement market a high-quality range of replacement belts for heavy-duty power transmission applications. They are specially developed for heavy-duty drives on farming machinery.

Gates agricultural belts are available as wrapped V-belts with concave sidewalls and Flex Weave® band and as raw-edge, cogged V-belts with special cog design. The belts are all characterised by one or more of the following additional features:

- unique tensile (premium aramid or polyester) member to maximise elongation resistance;
- advanced chemical treatment of the tensile members to assure improved bonding;
- multilayer elastomeric building process, with oriented fibres in the undercord, resulting in a better cord support.

All belts in this catalogue are manufactured in Gates' European facilities, all certified to the highest quality and safety and environmental standards.

***All this ensures your combine harvester or tractor will not suffer from breakdown during the season, as the belts are smooth-running, offer the highest power capacity and a long and trouble-free service life.***

## Gates on the web

In this ever-changing world of electronic communication and the internet, it has become more important than ever to have the right information available at the right time: quickly and accurately. Gates offers its complete Agricultural Belt programme in an online version. Thanks to this, you will always have all the information you need, right at your fingertips.

### *E-commerce website*

By going online, registered Gates distributors for agricultural belts can find the most current product information including newest application lists and cross-reference lists, check availability in real time and enter and track orders 24 hours/day. There are 4 possible search criteria: by Gates reference, by OE reference, by manufacturer or by machine.

The e-commerce website is particularly designed for our distributors and is password-protected. Our customer service team will be happy to provide you with your personal user ID and password.

Check it out at [www.gates-agri.com](http://www.gates-agri.com).

### *Website*

Go to [www.gates.com/europe/agri](http://www.gates.com/europe/agri) and use our fast sign-up procedure to find out all there is to know about the Gates Agricultural Belt programme and to consult our list of available literature. You can also request additional information through the online inquiry sheet.

Additionally, distributors may link up with this website thus supplying visitors with updated information on the Gates Agricultural Belt programme.

Check it out at [www.gates.com/europe/agri](http://www.gates.com/europe/agri).

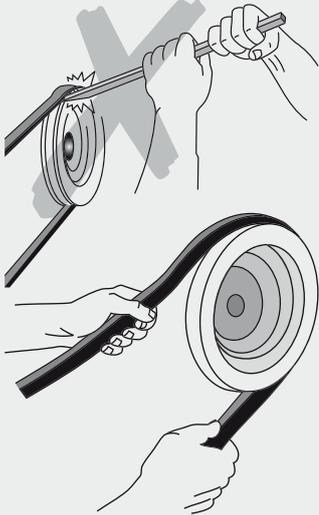

## A good maintenance programme

Belt drives regularly require a thorough inspection. Agricultural belts work in the heaviest conditions possible, which implies even more frequent inspections. The potential for long service life is built into every Gates belt. When coupled to a good maintenance programme, your belts and drives will run relatively trouble-free for a long period of time.

By following the advice below, you can maintain a drive efficiently, safely and with very little effort.

### Belt installation

- After the power has been turned off, isolated (i.e. locked) and the guard removed, unbolt one of the pulleys and move it until the belt is slack, or relax and secure the tensioner. The belt can then be removed without prising. Never prise off a belt!
 
- Remove old belts. Check them for unusual wear. Excessive wear may indicate problems with drive design or maintenance procedures.
- Select correct replacement belt.
- You can clean belts and pulleys with a rag slightly dampened with a light, non-volatile solvent. Avoid soaking or brushing the solvent on the belt. Do not sand or scrape the belt with a sharp object to remove grease or debris. Belts must be dry before using on a drive.
- Inspect pulleys for wear and damage. If more than 0.4 mm of wear can be seen, the pulley should be replaced. Make sure the pulleys are properly aligned.
- Inspect other drive components such as bearings and shafts for alignment, wear, lubrication...
- Install a new belt or belt set. Replace all belts on multiple belt drives. Do not mix old and new belts. Older belts do not retain tension as well as new belts. If you mix belts, the load may be carried only by the new belts. This can result in premature failure. Also, never mix belts from different manufacturers. Belts with different origins may have different characteristics that can cause the belts to work against each other, resulting in unusual strain and short service life.
- Take up centre distance on the drive. Rotate the drive by hand for a few revolutions until proper tension is obtained on the tension tester. Some long belts may appear to hang unevenly when installed. It is normal for belts within match tolerances to create noticeable differences in deflection. This "catenary effect" is a curve made by a cord of uniform weight suspended between two points. This appearance will change with proper run-in and tensioning.
- Secure pulley or tensioner mounting bolts to correct torque.
- Replace guard and make sure the drive can turn free from external elements.
- Let the belts run in for a while. This process consists of starting the drive, letting it run under full load, and then stopping, checking and retensioning to recommended values. Running the belts under full load allows them to seat themselves in the grooves. This run-in period will reduce the future need for retensioning.
- During start-up, look and listen for unusual noise or vibration. It is a good idea to shut down the machine and check the bearings and motor. If they feel hot, the belt tension may be too tight. Or the bearing may be misaligned or improperly lubricated.

## Belt and pulley inspection

### Belt inspection

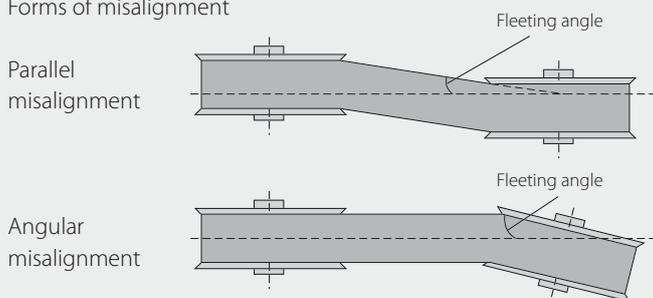

By observing signs of unusual belt wear or damage, you will be able to troubleshoot possible drive problems. Mark a point on the belt, or one of the belts on a multiple V-belt drive. Work your way around the belt(s), checking for cracks, frayed spots, cuts or unusual wear patterns. Check the belt for excessive heat. Belts do warm up while operating, but temperatures must not exceed certain limits. Your hand can tolerate up to about 45°C (113°F); if belts are too hot to touch, troubleshooting may be needed. Belts should be replaced if they show obvious signs of cracking, fraying or unusual wear.

### Pulley inspection

If belts have been removed from the drive, check pulleys for unusual wear or obvious signs of damage. Wear is not always obvious. Use sheave gauges to check V-grooves. Always check pulleys for proper alignment and mounting. Improperly aligned pulleys result in reduced service life. The main causes of misalignment are:

- pulleys are improperly located on the shafts;
- motor shafts and driven machine shafts are not parallel;
- pulleys are tilted due to improper mounting.

#### Forms of misalignment

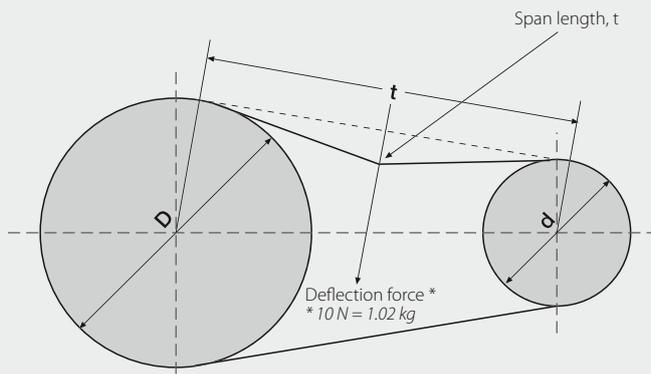

To check alignment, you will need a straight edge or, for long centre distance drives, heavy string. Line the straight edge or string along a machined face of both pulleys. Misalignment will show up as a gap between the face of the pulley and the straight edge or string. When using this method, make sure the distance between the groove edge and the outer rim of both pulleys is identical. Pulleys can also be checked for tilting with a spirit level.

You can also check misalignment by using Gates' unique laser alignment device, LASER AT-1. The laser line projected onto the targets allows you to quickly ascertain and correct misalignment.

## Belt tension

The final step is to check belt tension, and, if necessary, retension the belt. If too little tension is applied, V-belts may slip. The correct tension is the lowest tension at which the belts will transmit power when the drive is at full load.

The general procedure to check belt tension is as follows:

1. Measure at the centre of the span (t) the force required to deflect the belt on the drive 1 mm per 100 mm span length from its normal position.
2. If the measured force is less than the minimum recommended deflection force, the belts should be tightened.
3. New belts can be tensioned until the deflection force per belt is as close as possible to the maximum recommended deflection force.
4. To facilitate tension measuring Gates has developed the 507C sonic tension meter.

### ***Operation***

Shock loads should be avoided as much as possible, during start-up or in normal regime. It helps to avoid premature breaking of the belt.

Don't forget that the belt also acts as a safety device, protecting other components (shafts, pulleys, bearings) by breaking first.

Always first read the operating instructions of your machine attentively. Pay special attention to the safety measures that should be taken operating the machine. Always follow the instructions given there.

### ***After use***

Combine harvesters and tractors should be stored in a dry and covered location, out of the sun, and should be cleaned with water after use. Cleaning with derivatives of oil or other chemicals reduces the useful life of the components. Sunlight, oil, paint, solvents are all natural enemies of rubber products. Don't spray oil on the belts after washing the machine.

### ***Stock keeping***

Replacement belts should be stored in a dry location, out of the sun. Make sure not to knick them and not to put any weight on them.

### Troubleshooting guide

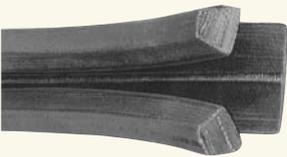

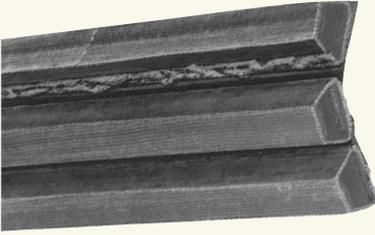

When troubleshooting a drive problem, your goal is to identify the cause(s) and then to take appropriate corrective action. The information in this section will help you put your drive back in operation.

	SYMPTOMS	PROBABLE CAUSE	SOLUTION
PREMATURE BELT FAILURE	Broken belt(s) 	1. Underdesigned drive 2. Belt rolled or prised onto pulley 3. Object falling into drive 4. Severe shock load	1. Redesign using Gates Drive Design Manual (E2/20070). 2. Use drive take-up when installing. 3. Provide adequate guard or drive protection. 4. Redesign to accommodate shock load.
	Belt fails to carry load (slip) without visible reason	1. Underdesigned drive 2. Damaged tensile member 3. Worn pulley grooves 4. Centre distance movement	1. Redesign using Gates Drive Design Manual (E2/20070). 2. Follow correct installation procedure. 3. Check for groove wear, replace as needed. 4. Check drive for centre distance movement during operation.
	Edge cord failure	1. Pulley misalignment 2. Damaged tensile member	1. Check and correct alignment. 2. Follow installation procedure.
	Belt delamination or undercord separation	1. Pulleys too small 2. Backside idler too small	1. Check drive design, replace with larger pulleys. 2. Increase backside idler to acceptable diameter.
SEVERE OR ABNORMAL BELT WEAR	Wear on belt top surface	1. Rubbing against guard 2. Idler malfunction	1. Replace or repair guard. 2. Replace idler.
	Wear on belt top corners	1. Belt-to-pulley fit incorrect (belt too small for groove)	1. Use correct belt-to-pulley combination.
	Wear on belt sidewalls 	1. Belt slip 2. Misalignment 3. Worn pulleys 4. Incorrect belt	1. Retension until slipping stops. 2. Realign pulleys. 3. Replace pulleys. 4. Replace with correct belt size.
	Wear on belt bottom corners	1. Belt-to-pulley fit incorrect 2. Worn pulleys	1. Use correct belt-to-pulley combination. 2. Replace pulleys.
	Wear on belt bottom surface 	1. Belt bottoming on pulley groove 2. Worn pulleys 3. Debris in pulleys	1. Use correct belt/pulley match. 2. Replace pulleys. 3. Clean pulleys.
	Undercord cracking	1. Pulley diameter too small 2. Belt slip 3. Backside idler too small 4. Improper storage	1. Use larger diameter pulleys. 2. Retension. 3. Use larger diameter backside idler. 4. Do not coil belt too tightly, kink or bend. Avoid heat and direct sunlight.

	SYMPTOMS	PROBABLE CAUSE	SOLUTION
SEVERE OR ABNORMAL BELT WEAR	Burn or hardening on belt bottom or sidewalls 	1. Belt slip 2. Worn pulleys 3. Underdesigned drive 4. Shaft movement	1. Retension until slipping stops. 2. Replace pulleys. 3. Redesign using Gates Drive Design Manual (E2/20070). 4. Check for centre distance changes.
	Extensive hardening of belt exterior Flaking, sticky or swollen belt surface 	1. Hot drive environment 1. Oil or chemical contamination	1. Improve ventilation to drive. 1. Do not use belt dressing. Eliminate sources of oil, grease or chemical contamination.
BELT TURNS OVER OR COMES OFF THE DRIVE	Involves single or multiple belts 	1. Shock loading or vibration 2. Foreign material in grooves 3. Misaligned pulleys 4. Worn pulley grooves 5. Damaged tensile member 6. Incorrectly placed flat idler pulley 7. Mismatched belt set 8. Poor drive design	1. Check drive design. Use Gates PowerBand® multiple belts. 2. Shield grooves and drive. 3. Realign pulleys. 4. Replace pulleys. 5. Use correct installation and belt storage procedure. 6. Carefully place flat idler on slack side of drive as close as possible to driveR pulleys. 7. Replace with new set of matched belts. Do not mix old and new belts. 8. Check for centre distance stability and vibration dampening.
BELT STRETCHES BEYOND AVAILABLE TAKE-UP	Multiple belts stretch unequally	1. Misaligned drive 2. Debris in pulleys 3. Broken tensile member or cord damaged 4. Mismatched belt set	1. Realign and retension drive. 2. Clean pulleys. 3. Replace all belts, install properly. 4. Install matched belt set.
	Single belt, or where all belts stretch evenly	1. Insufficient take-up allowance 2. Grossly overloaded or underdesigned drive 3. Broken tensile members	1. Check take-up. Use allowance specified in Gates Drive Design Manual (E2/20070). 2. Redesign drive. 3. Replace belt, install properly.
BELT NOISE	Squeal or "chirp"	1. Belt slip 2. Contamination	1. Retension. 2. Clean belts and pulleys.
	Slapping noise	1. Loose belts 2. Mismatched set 3. Misalignment	1. Retension. 2. Install matched belt set. 3. Realign pulleys so all belts share load equally.
	Rubbing sound	1. Guard interference	1. Repair, replace or redesign guard.
	Grinding sound	1. Damaged bearings	1. Replace, align and lubricate.

	SYMPTOMS	PROBABLE CAUSE	SOLUTION
BELT NOISE	Unusually loud drive	<ol style="list-style-type: none"> <li>1. Incorrect belt</li> <li>2. Worn pulleys</li> <li>3. Debris in pulleys</li> </ol>	<ol style="list-style-type: none"> <li>1. Use correct belt size. Use correct belt tooth profile for pulleys on synchronous drive.</li> <li>2. Replace pulleys.</li> <li>3. Clean pulleys, improve shielding, remove rust, paint or dirt from grooves.</li> </ol>
	Flapping belts	<ol style="list-style-type: none"> <li>1. Belts undertensioned</li> <li>2. Mismatched belts</li> <li>3. Pulley misalignment</li> </ol>	<ol style="list-style-type: none"> <li>1. Retension.</li> <li>2. Install new matched set.</li> <li>3. Align pulleys.</li> </ol>
UNUSUAL VIBRATION	Excessive vibration in drive system	<ol style="list-style-type: none"> <li>1. Incorrect belt</li> <li>2. Poor machine or equipment design</li> <li>3. Pulley out of round</li> <li>4. Loose drive components</li> </ol>	<ol style="list-style-type: none"> <li>1. Use correct belt section in pulley.</li> <li>2. Check structure and brackets for adequate strength.</li> <li>3. Replace pulley.</li> <li>4. Check machine components and guards, motor mounts, motor pads, bushings, brackets and framework for stability, adequate design strength, proper maintenance and proper installation.</li> </ol>
	Tie-band separation	<ol style="list-style-type: none"> <li>1. Worn pulleys</li> <li>2. Improper groove spacing</li> </ol>	<ol style="list-style-type: none"> <li>1. Replace pulleys.</li> <li>2. Use standard groove pulleys.</li> </ol>
PROBLEMS WITH MULTIPLE BELTS	 Frayed, worn or damaged top of tie-band	<ol style="list-style-type: none"> <li>1. Interference with guard</li> <li>2. Backside idler malfunction or damaged</li> </ol>	<ol style="list-style-type: none"> <li>1. Check guard.</li> <li>2. Repair or replace backside idler.</li> </ol>
	Multiple belt comes off drive	<ol style="list-style-type: none"> <li>1. Debris in pulleys</li> </ol>	<ol style="list-style-type: none"> <li>1. Clean grooves. Use single belts to prevent debris from being trapped in grooves.</li> </ol>
	 One or more ribs run outside of pulley	<ol style="list-style-type: none"> <li>1. Misalignment</li> <li>2. Undertensioned</li> </ol>	<ol style="list-style-type: none"> <li>1. Realign drive.</li> <li>2. Retension.</li> </ol>

	SYMPTOMS	PROBABLE CAUSE	SOLUTION
PULLEY PROBLEMS	Broken or damaged pulley	<ol style="list-style-type: none"> <li>1. Incorrect pulley installation</li> <li>2. Foreign objects falling into drive</li> <li>3. Excessive rim speeds</li> <li>4. Incorrect belt installation</li> </ol>	<ol style="list-style-type: none"> <li>1. Do not tighten bushing bolts beyond recommended torque values.</li> <li>2. Use adequate drive guard.</li> <li>3. Keep pulley rim speeds below maximum recommended values.</li> <li>4. Do not prise belts onto pulleys.</li> </ol>
	Severe, rapid groove wear	<ol style="list-style-type: none"> <li>1. Excessive belt tension</li> <li>2. Sand, debris or contamination</li> </ol>	<ol style="list-style-type: none"> <li>1. Retension, check drive design.</li> <li>2. Clean and shield drive as well as possible.</li> </ol>
PROBLEMS WITH OTHER DRIVE COMPONENTS	Bent or broken shaft	<ol style="list-style-type: none"> <li>1. Extreme belt overtension</li> <li>2. Overdesigned drive *</li> <li>3. Accidental damage</li> <li>4. Machine design error</li> </ol>	<ol style="list-style-type: none"> <li>1. Retension.</li> <li>2. Check drive design, may need to use smaller or fewer belts.</li> <li>3. Redesign drive guard.</li> <li>4. Check machine design.</li> </ol>
	Damaged guard	<ol style="list-style-type: none"> <li>1. Accidental damage or poor guard design</li> </ol>	<ol style="list-style-type: none"> <li>1. Repair, redesign for durability.</li> </ol>
HOT BEARINGS	Overtensioned belt	<ol style="list-style-type: none"> <li>1. Worn grooves - belts bottoming and will not transmit power until overtensioned *</li> <li>2. Improper tension</li> </ol>	<ol style="list-style-type: none"> <li>1. Replace pulleys, tension drive properly.</li> <li>2. Retension.</li> </ol>
	Too small pulleys	<ol style="list-style-type: none"> <li>1. Motor manufacturer's pulley diameter recommendation not followed</li> </ol>	<ol style="list-style-type: none"> <li>1. Redesign using Gates Drive Design Manual (E2/20070).</li> </ol>
	Poor bearing condition	<ol style="list-style-type: none"> <li>1. Bearing underdesigned</li> <li>2. Bearing not properly maintained</li> </ol>	<ol style="list-style-type: none"> <li>1. Check bearing design.</li> <li>2. Align and lubricate bearing.</li> </ol>
	Pulleys too far out on shaft	<ol style="list-style-type: none"> <li>1. Error or obstruction problem</li> </ol>	<ol style="list-style-type: none"> <li>1. Place pulleys as close as possible to bearings. Remove obstructions.</li> </ol>
	Belt slippage	<ol style="list-style-type: none"> <li>1. Drive undertensioned</li> </ol>	<ol style="list-style-type: none"> <li>1. Retension.</li> </ol>
PERFORMANCE PROBLEMS	Incorrect driveN speeds	<ol style="list-style-type: none"> <li>1. Design error</li> <li>2. Belt slip</li> </ol>	<ol style="list-style-type: none"> <li>1. Use correct driveR/driveN pulley size for desired speed ratio.</li> <li>2. Retension drive.</li> </ol>

\* Using too many belts, or belts that are too large, can severely stress motor or driveN shafts. This can happen when load requirements are reduced on a drive, but the belts are not redesigned accordingly. This can also happen when a drive is greatly overdesigned. Forces created from belt tensioning are too great for the shafts.

## Make sure you have the right agricultural replacement belt part number

### COMBINE HARVESTERS

In the index on page 21-23, the names of the combine harvester makes and models are presented in alphabetical order. Follow the associated page number references to go directly to the make and model of your interest.

Once you are on the right page, you go to the application in question. There you will find the right Gates replacement belt reference. Additionally, you can check whether the OE reference on your belt matches with the belt you found in the list.

#### Example

- ① If you want a replacement belt for the tresher of your ARBOS 705 A4L combine harvester, you search for ARBOS 705 A4L in the alphabetical listing on page 21.
- ② You go to page 26 of the application listing and look up the Gates reference for the tresher which is 1924209.

 <b>Drawing</b>	 <b>Original equipment reference</b>
 <b>Application</b>	 <b>Gates reference</b>
 <b>Number of belts</b>	

### TRACTORS

In the index on page 329, all tractor makes are alphabetically listed. Simply find the tractor make in this listing and the corresponding page number will refer you to the page where you will find all necessary details.

Once you have the right page in front of you, you go the tractor model in question and check engine type, year of production, application type and additional information. This will lead you to the right Gates replacement belt reference. Additionally, you can check whether the OE reference on your belt matches with the belt you found in the list.

#### Example

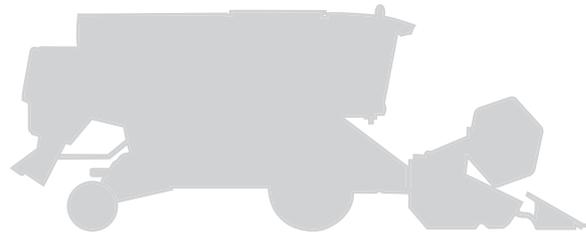

- ① If you want a replacement belt for the generator of your JOHN DEERE 40 tractor, you search for JOHN DEERE in the alphabetical listing on page 329.
- ② You go to page 360 of the application listing and search for JOHN DEERE 40. You check engine type (e.g. 2-CYL. 101), year of production (e.g. 1953), and you will find that the Gates reference for the generator is 0173186.

 <b>Tractor make/model</b>	 <b>Additional information on application</b>	 <b>To</b>
 <b>Engine type</b>	 <b>Original equipment reference</b>	 <b>With</b>
 <b>Year of production</b>	 <b>Gates reference</b>	 <b>Without</b>
 <b>Application</b>	 <b>From</b>	

### MANUFACTURERS' PART NUMBER LISTING

With this list on page 385 you can easily identify the Gates belt corresponding to the OE belt. The information in this section is meant for reference only. Always determine the correct replacement belt from the application listings in this catalogue.
