SAFETY PRECAUTIONS AND NOTES

The information in the following tables has been compiled from vehicle manufacturers' specifications and is applicable only to original equipment air conditioning versions. All work on air-conditioning systems should only be carried out by specially trained staff taking the respective safety regulations and country-specific legislation into account.

All rights reserved, including the translation. No part of this table may be duplicated mechanically, electronically, by photocopy, microfiche or any method without our written permission. This information has been compiled with all due care. In view of the extensiveness of the material we must disclaim any liability for errors. Previous versions are rescinded by the publication of this information.

PAO Oil 68 AND PAO Oil 68 Plus UV

PRODUCT FEATURES

PAO Oil 68 is not hygroscopic, i.e. unlike other oils, it does not absorb moisture from the ambient air.

It can be used as an alternative to the various PAG oils that are offered for R134a*. As a result, you only need to stock one type of oil, instead of three different PAG oils. PAO oil 68 has proved successful in practice for more than 10 years and is contributing towards improving efficiency of the air-conditioning system. It has no negative effects on the components in the air conditioning circuit. The same applies to its use in air-conditioning service stations (confirmed by the manufacturer on the basis of the sealed tube test in the ASHRAE 97 standard).

The oil is available with added contrast agent (PAO Oil 68 Plus UV) or without (PAO Oil 68).

Using PAO oil 68 and PAO oil 68 Plus UV in Behr Hella Service compressors, fully maintains the warranty entitlement.

(* apart from in electric compressors.)

APPLICATION/EFFECT

PAO Oil 68

The molecules of the PAO Oil 68 adhere to all surfaces in the system, displace other molecules and form a thin layer on the surface of the system components.

Due to the fact that the molecules do not try to connect to each other, this oil layer is just one molecule "thick". Therefore, in contrast to many other oils, there is no risk of oil collecting in the evaporator and the associated loss of cooling output when PAO Oil 68 is used.

Due to the fact that PAO Oil 68 only slightly connects to the refrigerant, only a small part of the oil circulates through the system. The rest stays where the oil is actually needed – in the compressor.

An oil film in the components improves the seal or respectively reduces the friction between the moving parts in the compressor. This reduces the operating temperature and wear. This plays an important role in the operating safety and reduction of noise and also ensures that compressor run-times are shorter, thus reducing energy consumption.

PAO Oil 68 Plus UV

PAO Oil 68 Plus UV has the same advantageous properties as PAO Oil 68.

It is additionally enhanced with a concentrated, highly effective contrast agent that is used for UV leak detection.

The advantage of the low Vol%-concentration of the contrast agent is that all the properties of the oil are retained and there are no negative effects on system components or service units whatsoever.

To have enough effect for troubleshooting, 10 Vol% of the system oil quantity already suffices. For example, with a total system oil quantity of 180 ml, this corresponds to just 18 ml PAO Oil 68 Plus UV.

In addition, PAO Oil 68 Plus UV can also be used as the only oil to fill the whole system without there being any negative effects.

PAO OIL 68 – COMPRESSOR OIL, PAO-OIL 68 PLUS UV – COMPRESSOR OIL WITH CONTRAST AGENT

Product	Application	Compressor type	Refrigerant	Viscosity Class	Contents	Item number

* Passenger cars, trucks, agricultural and construction machinery

** Except electrical compressors

The designated use of compressor oils depends on the type of compressor type selected and refrigerant used. Choosing the wrong oil can cause damage. Vehicle or manufacturer-specific instructions must be followed carefully.

Other oils from Behr Hella Service:

* Passenger cars, trucks, agricultural and construction machinery

** Except electrical compressors

The designated use of compressor oils depends on the type of compressor type selected and refrigerant used. Choosing the wrong oil can cause damage. Vehicle or manufacturer-specific instructions must be followed carefully.

THE OILS IN COMPARISON

Type of oil	Use	Note
PAG Oils for refrigerant R134a	<p>Different grades of PAG Oil with different flow properties (viscosities) are available for use with refrigerant R134a.</p> <p>As PAG Oils are hygroscopic, cans do not have a long shelf life once opened.</p>	<p>Standard PAG Oils are not suitable for refrigerant R1234yf or for electrically powered air conditioning compressors</p>
PAG oil YF for refrigerant R1234yf	<p>Different PAG oils with different flow properties (viscosities) are still available for use with refrigerant R1234yf.</p> <p>What makes these PAG oils from Behr Hella Service so special is that they are not only suitable for use with R1234yf, but can also be used with the refrigerant R134a.</p> <p>As PAG Oils are hygroscopic, cans do not have a long shelf life once opened.</p>	<p>PAG Oil YF is suitable for both of the refrigerants R1234yf and R134a</p>

PAO Oil
for refrigerant R134a
and other refrigerants

Can be used as an alternative to the various PAG oils that are offered for R134a (has the advantage of not being hygroscopic, i.e. unlike other oils, it does not absorb moisture from the ambient air).

The 3 different grades of PAO Oil that Behr Hella Service offers (AA1, AA2 und AA3) can be used in conjunction with numerous different refrigerants (see product overview).

At present, however, the PAO Oils offered by Behr Hella Service have not yet been approved for use with R1234yf, nor for use in electric compressors in hybrid vehicles.

The possibility of using the oil with refrigerant R1234yf and in electrically powered air conditioning compressors is currently being tested.

POE Oil
for refrigerant R134a

Can be used on all hybrid vehicles with an electric compressor that are filled with POE Oil at the factory (some electrically powered compressors for hybrid vehicles are also filled with special PAG Oil at the factory).

Not suitable for refrigerant R1234yf
