Vibracoustic
CV Air Springs

Vibracoustic CV Air Springs GmbH is specialized in the design and manufacturing of commercial vehicle air springs. Our company is headquartered in Hamburg (Germany) and has facilities in Hungary, Turkey, China and Mexico. The combination of German engineering and our standardized best in class processes ensures that Vibracoustic CV Air Springs consistently provide the highest level of quality and service to our customers, everywhere in the world. All our production locations are certified according the required standards of the automotive industry, such as TS16949, ISO14001, ISO18001 and Ghost-R. With its own rubber mixing facility, Vibracoustic CV Air Springs is able to control the complete production process from raw material until the finished product, all under one roof. Our modern plant in Bursa has a total floor space of 22,000sq metres and produces more than two million Air Springs per year. The Blacktech brand has a high reputation within the global replacement market. The matching product design, constant quality and design to cost philosophy combined with a wide range of products ensures that Blacktech remains as a leading brand within the global air spring replacement market.

Blacktech Air Spring Product Range

Rolling lobe air springs most common air springs for truck, trailer, bus and light commercial vehicles.

Convoluted air springs used in a large variety of application areas. Mostly they are used in industrial pneumatic applications as pneumatic lifting cylinders or in vibration isolation as spring elements.

Cabin air springs to reduce the vibration of the cabin and to control the ride height and stiffness. These are adjustable depending to the loading and road conditions.

Seat air springs designed to provide maximum comfort for the driver and to decrease driver's fatigue, increase road safety and to decrease fuel consumption due to increasing driver's comfort.

PRODUCT LIFE TEST

EXPANSION AND LIFTING TEST

BURST TEST

FREQUENCY TEST

Blacktech Air Suspension Systems;

- Provide equal suspension comfort under all kinds of load and road surface conditions.
- Do not need maintenance.
- Have easy and economical replacement.
- Ease loading and unloading by adjusting chassis height of the vehicle.
- Ease getting on and off the bus especially for disabled people and children in some bus types.
- Protect the vehicle and the road from vibrations while driving.
- Prevent the vehicle from leaning to one side in unbalanced loading conditions.
- Increase road holding of the vehicle.
- Protect fragile loads from vibration.
- Used in cabins and driver's seat to provide more comfortable driving.

Blacktech Air Springs are put through wide-ranging tests procedures to ensure that the air springs operate correctly and comply with required quality standards. Combining its experience with the aim of being known as a worldwide company and supplying high quality products we direct our infrastructure investments covering the following quality tests and consequently creating most suitable production conditions.

Product Life Test

Based on annual audit plans and innovations in new product development, the products are put through a life test in order to determine the performance of the air springs on the vehicle. During this test the air springs are installed to a see-saw replicating the movement of the vehicle, and then set to work in proper ride height and under maximum pressure conditions specified in product specifications. Pressure and expansion levels are recorded, at the same time all the modifications of air springs are traced by computer. Test results are summarized in graphs and tables, then the accuracy and compliance of the results to the specifications verified by engineers. The out-put data from the life-test results are used as an indicator in Research & Development activities, product improvements, corrective and preventive actions. Blacktech Air Springs are tested for millions of cycles without product failure or performance degradation during the tests.

Expansion and Lifting Test

The air springs are designed to prove balanced transportation of the heavy loads. Therefore it should be checked whether the air springs have required expansion and lifting rates. By generating load lifting conditions of air spring in the vehicle, it is checked if the air spring is reached intended lifting rates and diameter change under escalating load is observed. Since the tests are performed by computer automatically, it is possible to determine the diameter expansion according to the lifting force in every pressure level. Test results are summarized in graphs and tables, then compliance of the results to the specifications verified by engineers.

Burst Test

Burst tests are performed to determine maximum resistance pressure of air springs. In order to ensure work safety, air springs are inflated in a closed chamber. Consequent burst pressure is verified in accordance with product test specifications. Burst tests are also performed with computer control.

Frequency Test

Products are tested for resistance on different frequencies. Frequency test is performed to calculate frequency under a certain pressure and certain load. Between 0.4 hz and 8.5 hz frequency are applied. Also it is possible to see the air spring's pressure and load level between bound and rebound movements by the frequency test.

SERVICE AND COMPLETE AIR SPRINGS

blacktech™

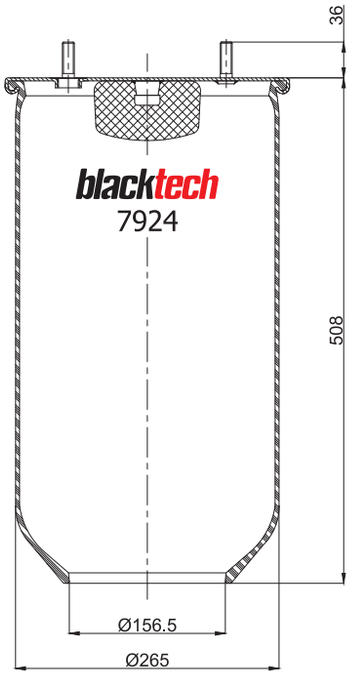

Vibracoustic
CV Air Springs

Components of Air Springs

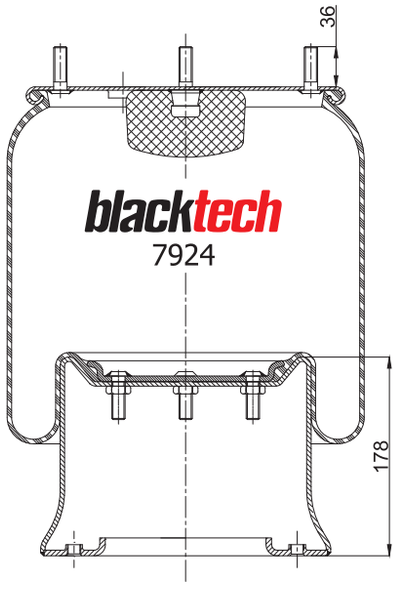

1. Air inlet
2. Mounting stud
3. Plate
4. Bumper (Generaly used in air suspension applications as fail-safe device.)
5. Rubber air spring body
6. Piston (There two different complete applications such as with metal piston or plastic piston.)

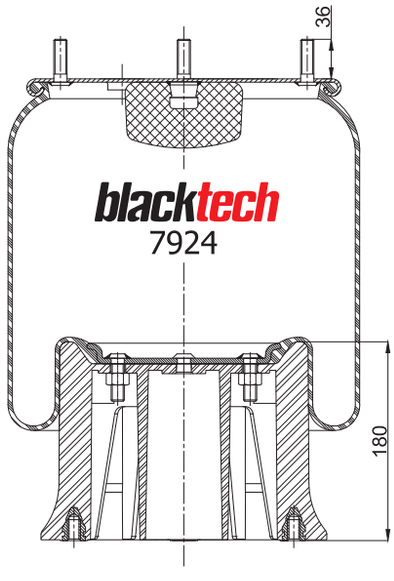

Product Identification / Roll Air Springs

RML 7924
Air spring system without piston

RML 7924 C
Complete air spring
assembly with crimped top plate
and metal piston

RML 7924 CP
Complete air spring
assembly with crimped top plate
and plastic piston

CONVOLUTED AIR SPRINGS

blacktech™

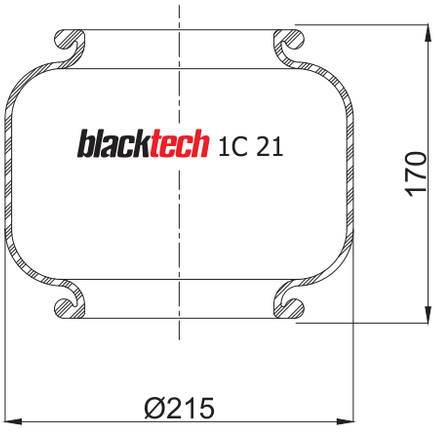

Vibracoustic
CV Air Springs

Components of Air Springs

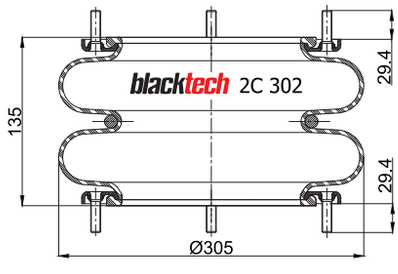

1. Combination stud / Air fitting
2. Plate
3. Bumper (Generaly used in air suspension applications as fail-safe device.)
4. Rubber air spring body
5. Girdle hoop

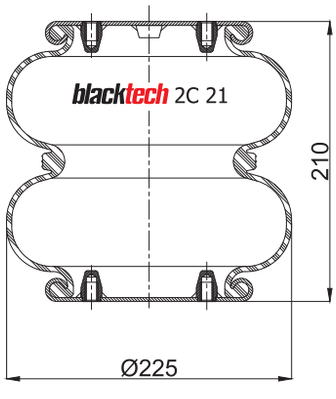

Product Identification / Roll Air Springs

1 C1 21 - 170 S
Rubber Bellow Only

2C 302 - 135 F01
With steel bead ring (customer's own mounting plate should be attached to the air spring)

2C 21 - 210 P13
With crimped baead plate or with steel bead ring and the mounting plate

CABIN, SEAT AND LIFT AIR SPRINGS

blacktech™

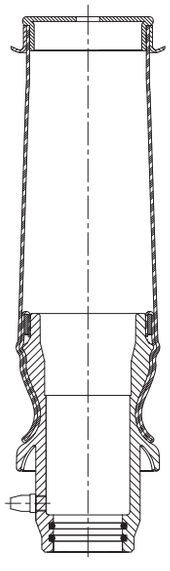

Vibracoustic
CV Air Springs

Components of Air Springs

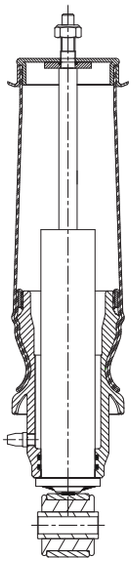

1. Sleeve
2. Air inlet
3. Piston
4. Clamping Plate
5. Clamping Ring
6. Shock Absorber

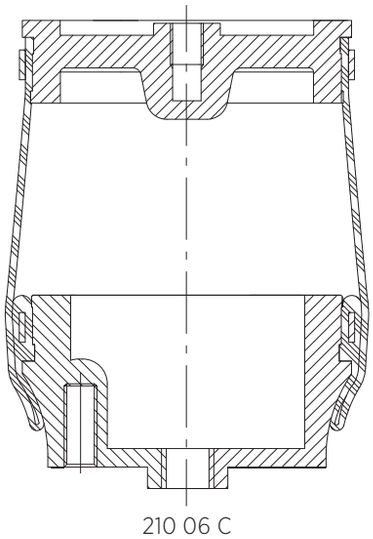

Product Identification / Roll Air Springs

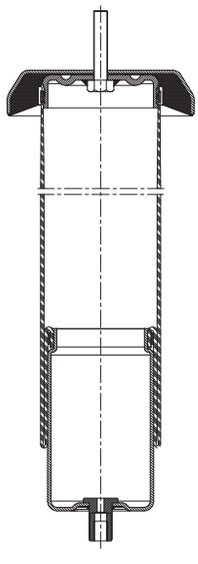

110 01 C
Cabin air spring
without shock
absorber

110 01 CA
Cabin air spring
with shock
absorber plates

210 06 C
Seat air springs

310 01 C
Lift air springs
