#### <u>Type</u>

[1] Substance classified with a health or environmental hazard

[2] Substance with a workplace exposure limit

Occupational exposure limits, if available, are listed in Section 8.

# **SECTION 4: First aid measures**

| 4.1 Description of first aid me | easures                                                                                                                                                                                                                                             |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Eye contact                     | In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Eyelids should be held away from the eyeball to ensure thorough rinsing. Check for and remove any contact lenses. Get medical attention.                   |
| Skin contact                    | Wash skin thoroughly with soap and water or use recognised skin cleanser. Remove contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention if irritation develops.                    |
| Inhalation                      | If inhaled, remove to fresh air. In case of inhalation of decomposition products in a fire,<br>symptoms may be delayed. The exposed person may need to be kept under medical<br>surveillance for 48 hours. Get medical attention if symptoms occur. |
| Ingestion                       | Do not induce vomiting unless directed to do so by medical personnel. Get medical attention if symptoms occur.                                                                                                                                      |
| Protection of first-aiders      | No action shall be taken involving any personal risk or without suitable training.                                                                                                                                                                  |

### 4.2 Most important symptoms and effects, both acute and delayed

See Section 11 for more detailed information on health effects and symptoms.

| Potential acute health effects       |                                                                                                                  |  |  |  |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------|--|--|--|
| Inhalation                           | Exposure to decomposition products may cause a health hazard. Serious effects may be delayed following exposure. |  |  |  |
| Ingestion                            | No known significant effects or critical hazards.                                                                |  |  |  |
| Skin contact                         | Defatting to the skin. May cause skin dryness and irritation.                                                    |  |  |  |
| Eye contact                          | No known significant effects or critical hazards.                                                                |  |  |  |
| <b>Delayed and immediate effects</b> | as well as chronic effects from short and long-term exposure                                                     |  |  |  |
|                                      | Overexposure to the inhalation of airborne droplets or aerosols may cause irritation of the respiratory tract.   |  |  |  |
| Ingestion                            | Ingestion of large quantities may cause nausea and diarrhoea.                                                    |  |  |  |
| Skin contact                         | Prolonged or repeated contact can defat the skin and lead to irritation and/or dermatitis.                       |  |  |  |
| Eye contact                          | Potential risk of transient stinging or redness if accidental eye contact occurs.                                |  |  |  |

#### 4.3 Indication of any immediate medical attention and special treatment needed

```
Notes to physician
```

Treatment should in general be symptomatic and directed to relieving any effects. In case of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed person may need to be kept under medical surveillance for 48 hours.

# **SECTION 5: Firefighting measures**

| 5.1 Extinguishing media                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                         |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Suitable extinguishing         In case of fire, use foam, dry chemical or carbon dioxide extinguisher or spray.           media         In case of fire, use foam, dry chemical or carbon dioxide extinguisher or spray. |                                                                                                                                                                                                                                                                                                                                                         |  |
| Unsuitable extinguishing media                                                                                                                                                                                           | Do not use water jet. The use of a water jet may cause the fire to spread by splashing the burning product.                                                                                                                                                                                                                                             |  |
| 5.2 Special hazards arising from                                                                                                                                                                                         | m the substance or mixture                                                                                                                                                                                                                                                                                                                              |  |
| Hazards from the substance or mixture                                                                                                                                                                                    | In a fire or if heated, a pressure increase will occur and the container may burst.                                                                                                                                                                                                                                                                     |  |
| Hazardous combustion<br>products                                                                                                                                                                                         | Combustion products may include the following:<br>carbon oxides (CO, CO₂) (carbon monoxide, carbon dioxide)<br>nitrogen oxides (NO, NO₂ etc.)                                                                                                                                                                                                           |  |
| 5.3 Advice for firefighters                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                         |  |
| Special precautions for<br>fire-fighters                                                                                                                                                                                 | No action shall be taken involving any personal risk or without suitable training. Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire.                                                                                                                                                             |  |
| Special protective<br>equipment for fire-fighters                                                                                                                                                                        | Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode. Clothing for fire-fighters (including helmets, protective boots and gloves) conforming to European standard EN 469 will provide a basic level of protection for chemical incidents. |  |

# SECTION 6: Accidental release measures

| 6.1 Personal precautions, prote | ctive equipment and emergency procedures                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| For non-emergency<br>personnel  | No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilt material. Floors may be slippery; use care to avoid falling. Put on appropriate personal protective equipment.                                                            |
| For emergency responders        | If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".                                                                                                                                                                             |
| 6.2 Environmental precautions   | Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers.<br>Inform the relevant authorities if the product has caused environmental pollution (sewers,<br>waterways, soil or air).                                                                                                                                                           |
| 6.3 Methods and material for co | ontainment and cleaning up                                                                                                                                                                                                                                                                                                                                                            |
| Small spill                     | Stop leak if without risk. Move containers from spill area. Absorb with an inert material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.                                                                                                                                                                                  |
| Large spill                     | Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water courses, basements or confined areas. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations. Dispose of via a licensed waste disposal contractor. |
| 6.4 Reference to other sections | See Section 1 for emergency contact information.<br>See Section 5 for firefighting measures.<br>See Section 8 for information on appropriate personal protective equipment.<br>See Section 12 for environmental precautions.<br>See Section 13 for additional waste treatment information.                                                                                            |

# **SECTION 7: Handling and storage**

**Occupational exposure limits** 

| 7.1 Precautions for safe ha                                            | ndling                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Protective measures                                                    | Put on appropriate personal protective equipment.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Advice on general occupational hygiene                                 | Eating, drinking and smoking should be prohibited in areas where this material is handled,<br>stored and processed. Wash thoroughly after handling. Remove contaminated clothing and<br>protective equipment before entering eating areas. See also Section 8 for additional<br>information on hygiene measures.                                                                                                                                                             |
| 7.2 Conditions for safe<br>storage, including any<br>incompatibilities | Store in accordance with local regulations. Store in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10). Keep away from heat and direct sunlight. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Store and use only in equipment/ containers designed for use with this product. Do not store in unlabelled containers. |
| Not suitable                                                           | Prolonged exposure to elevated temperature.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 7.3 Specific end use(s)                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Recommendations                                                        | See section 1.2 and Exposure scenarios in annex, if applicable.                                                                                                                                                                                                                                                                                                                                                                                                              |
| SECTION 8: Exposi                                                      | ure controls/personal protection                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 8.1 Control parameters                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## **SECTION 8: Exposure controls/personal protection**

sensitiser.

TWA: 0.08 mg/m<sup>3</sup> 8 hours. Issued/Revised: 2/2020 PEAK: 0.08 mg/m<sup>3</sup> 15 minutes. Issued/Revised: 2/2020

Whilst specific OELs for certain components may be shown in this section, other components may be present in any mist, vapour or dust produced. Therefore, the specific OELs may not be applicable to the product as a whole and are provided for guidance only.

Recommended monitoring procedures

Reference should be made to monitoring standards, such as the following: European Standard EN 689 (Workplace atmospheres - Guidance for the assessment of exposure by inhalation to chemical agents for comparison with limit values and measurement strategy) European Standard EN 14042 (Workplace atmospheres - Guide for the application and use of procedures for the assessment of exposure to chemical and biological agents) European Standard EN 482 (Workplace atmospheres - General requirements for the performance of procedures for the measurement of chemical agents) Reference to national guidance documents for methods for the determination of hazardous substances will also be required.

**Biological exposure indices**

# **SECTION 8: Exposure controls/personal protection**

technical information on breakthrough times for the recommended glove type. Our recommendations on the selection of gloves are as follows:

|                                 | Continuous contact:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                 | Gloves with a minimum breakthrough time of 240 minutes, or >480 minutes if suitable gloves<br>can be obtained.<br>If suitable gloves are not available to offer that level of protection, gloves with shorter<br>breakthrough times may be acceptable as long as appropriate glove maintenance and<br>replacement regimes are determined and adhered to.                                                                                                                                                                                                                                                                                                         |
|                                 | Short-term / splash protection:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                                 | Recommended breakthrough times as above.<br>It is recognised that for short-term, transient exposures, gloves with shorter breakthrough times<br>may commonly be used. Therefore, appropriate maintenance and replacement regimes must<br>be determined and rigorously followed.                                                                                                                                                                                                                                                                                                                                                                                 |
|                                 | Glove Thickness:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                                 | For general applications, we recommend gloves with a thickness typically greater than 0.35 mm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                                 | It should be emphasised that glove thickness is not necessarily a good predictor of glove resistance to a specific chemical, as the permeation efficiency of the glove will be dependent on the exact composition of the glove material. Therefore, glove selection should also be based on consideration of the task requirements and knowledge of breakthrough times. Glove thickness may also vary depending on the glove manufacturer, the glove type and the glove model. Therefore, the manufacturers' technical data should always be taken into account to ensure selection of the most appropriate glove for the task.                                  |
|                                 | Note: Depending on the activity being conducted, gloves of varying thickness may be required for specific tasks. For example:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                 | • Thinner gloves (down to 0.1 mm or less) may be required where a high degree of manual dexterity is needed. However, these gloves are only likely to give short duration protection and would normally be just for single use applications, then disposed of.                                                                                                                                                                                                                                                                                                                                                                                                   |
|                                 | • Thicker gloves (up to 3 mm or more) may be required where there is a mechanical (as well as a chemical) risk i.e. where there is abrasion or puncture potential.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Skin and body                   | Use of protective clothing is good industrial practice.<br>Personal protective equipment for the body should be selected based on the task being<br>performed and the risks involved and should be approved by a specialist before handling this<br>product.<br>Cotton or polyester/cotton overalls will only provide protection against light superficial<br>contamination that will not soak through to the skin. Overalls should be laundered on a regular<br>basis. When the risk of skin exposure is high (e.g. when cleaning up spillages or if there is a<br>risk of splashing) then chemical resistant aprons and/or impervious chemical suits and boots |
| <u>Refer to standards:</u>      | will be required.<br>Respiratory protection: EN 529<br>Gloves: EN 420, EN 374<br>Eye protection: EN 166<br>Filtering half-mask: EN 149<br>Filtering half-mask with valve: EN 405<br>Half-mask: EN 140 plus filter<br>Full-face mask: EN 136 plus filter<br>Particulate filters: EN 143<br>Gas/combined filters: EN 14387                                                                                                                                                                                                                                                                                                                                         |
| Environmental exposure controls | Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.                                                                                                                                                                                                                                                                                                                                             |

|----------------|----------------|--------------------|--------|--------------|-------------|----|------------|
| Version 7      | Date of issue  | 15 June 2023       | Format | Hungary      | Langua      | ge | ENGLISH    |
| Date of previo | ous issue      | 17 November 2022.  |        | (Hungary)    |             |    |            |

# **SECTION 11: Toxicological information**

Not available.

Remarks - Endocrine
disruptor - Health
11.2.2 Other information
Not available.

**SECTION 12: Ecological information** 

### 12.1 Toxicity

Environmental hazards Not classified as dangerous

#### 12.2 Persistence and degradability

Expected to be biodegradable.

## 12.3 Bioaccumulative potential

This product is not expected to bioaccumulate through food chains in the environment.

| 12.4 Mobility in soil                     |                                                                      |
|-------------------------------------------|----------------------------------------------------------------------|
| Soil/water partition<br>coefficient (Koc) | Not available.                                                       |
| Mobility                                  | Spillages may penetrate the soil causing ground water contamination. |

#### 12.5 Results of PBT and vPvB assessment

Product does not meet the criteria for PBT or vPvB according to Regulation (EC) No. 1907/2006, Annex XIII.

| 12.6 Endocrine disrupting<br>properties        | Not available.                                                                                                         |
|------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Remarks - Endocrine<br>disruptor - Environment | Not available.                                                                                                         |
| Other ecological information                   | Spills may form a film on water surfaces causing physical damage to organisms. Oxygen transfer could also be impaired. |
| 12.7 Other adverse effects                     | No known significant effects or critical hazards.                                                                      |

# **SECTION 13: Disposal considerations**

### 13.1 Waste treatment methods

| Product             |                                                                                                                                                                      |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Methods of disposal | Where possible, arrange for product to be recycled. Dispose of via an authorised person/<br>licensed waste disposal contractor in accordance with local regulations. |
| Hazardous waste     | Yes.                                                                                                                                                                 |

# European waste catalogue (EWC)

| Waste code | Waste designation                       |  |  |  |
|------------|-----------------------------------------|--|--|--|
| 13 02 08*  | other engine, gear and lubricating oils |  |  |  |
|            |                                         |  |  |  |

However, deviation from the intended use and/or the presence of any potential contaminants may require an alternative waste disposal code to be assigned by the end user.

| Packaging           |                                                                                                                                                                                                                                   |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Methods of disposal | Where possible, arrange for product to be recycled. Dispose of via an authorised person/<br>licensed waste disposal contractor in accordance with local regulations.                                                              |
| Special precautions | This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers. |

#### Notice to reader

All reasonably practicable steps have been taken to ensure this data sheet and the health, safety and environmental information contained in it is accurate as of the date specified below. No warranty or representation, express or implied is made as to the accuracy or completeness of the data and information in this data sheet.

The data and advice given apply when the product is sold for the stated application or applications. You should not use the product other than for the stated application or applications without seeking advice from BP Group.

It is the user's obligation to evaluate and use this product safely and to comply with all applicable laws and regulations. The BP Group shall not be responsible for any damage or injury resulting from use, other than the stated product use of the material, from any failure to adhere to recommendations, or from any hazards inherent in the nature of the material. Purchasers of the product for supply to a third party for use at work, have a duty to take all necessary steps to ensure that any person handling or using the product is provided with the information in this sheet. Employers have a duty to tell employees and others who may be affected of any hazards described in this sheet and of any precautions that should be taken. You can contact the BP Group to ensure that this document is the most current available. Alteration of this document is strictly prohibited.
